

CHAIN- AND BELT ELEVATORS

- Performance up to 1000 t/hr
- Standardized modular system
- Hardly limitation in terms of erection height and conveying capacity
- Extremely reliable due to proven technical concept
- Easy maintenance due to generous maintenance hatches
- Planning and manufacturing according to customer requirements

ZUTHER-DESIGN:

All ZUTHER - elevators are equipped with high quality drive components and ensure, together with a high quality steel plate construction, a high running performance and thus secure your investment. Our bucket elevators prove themselves daily under the most severe operating conditions all over the world. Due to the generously dimensioned accesses, maintenance can be carried out easily. Single-lot shafts made of 4 - 8 mm sheet steel ensure a free-standing installation.

Most of the BWX series elevators up to a length of 40 m are completely assembled in the factory and delivered in one piece. This saves time and money during installation. All that remains to be done on site are the connections and fine-tuning have to be carried out on site. Elevators with greater heights can, of course, be erected by our qualified assembly team in the shortest possible time.
