

BULK MATERIAL COLLECTION

RECEIVING PIT

FIND OUT MORE

- Traversable variant, wheel pressure up to 10 t
- High receiving capacities possible
- Hygiene-optimised design for virtually no residues
- Dust barriers for reduced dust
- Numerous optional features
- Perfect fit: quick and easy assembly

HYGIENE-OPTIMISED BULK MATERIAL COLLECTION

The Zuther receiving pit impresses with its hygiene-optimised design. Its special construction ensures almost residue-free operation. Our gratings are easy to remove and designed to withstand wheel pressures of up to 10 tonnes. The receiving hopper is made of welded and bolted sheet steel with an integrated unloading channel. With its integrated pit haul-off, the Zuther pit requires less installation depth.

The Zuther dust barriers ensure a low level of dust discharge. These can also be installed later. A stationary pit dedusting system is also optionally available. The special construction ensures quick and precise assembly: The pit is usually delivered as a single component and “hooked” into the concrete on site.
