DUST LOADING SYSTEM

- Optimum loading of dust, chaff and waste
- Fast electric raising and lowering
- Additional safety ropes
- Optimum use of volume thanks to distribution screw
- Integrated full indicators protect against overflow
- Reliable system tried and tested over the years

SHIP LOADING SYSTEMS FROM ZUTHER

A lowerable dust bell with integrated distribution screw ensures virtually dust-free loading of the waste material. The dust bell is suspended from a robust steel frame and can be raised or lowered easily and quickly with its electric winches. The winches are conveniently operated using a pendant control located directly at the loading point. The integrated distribution screw ensures optimum volume utilisation of the container/trailer and the full indicator prevents overfilling. All components exposed to the weather are fully galvanised and weatherproof.
