

DUST LOADING SYSTEM FROM ZUTHER

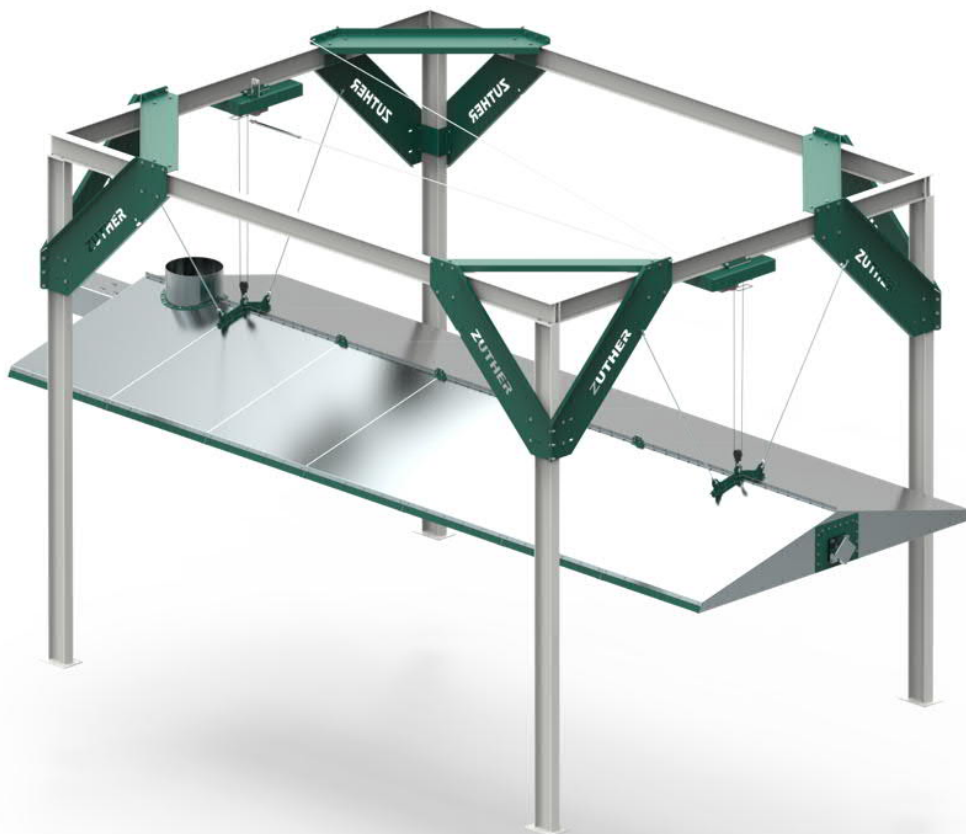

Experience from 100 years - Your specialist for conveyor technology

A lowerable dust bell with integrated distribution screw ensures virtually dust-free loading of the waste material. The dust bell is suspended from a robust steel frame and can be raised or lowered quickly and easily thanks to the electric winches. The winch is conveniently operated by means of a control bottle directly at the loading point. Due to the integrated distribution screw, an optimal volume utilization of the container/trailer is ensured and, with the help of the full indicator, overfilling is prevented. This method has already proven its worth with many customers due to its simple handling and sophisticated design. All components exposed to the weather are completely galvanized and thus weatherproof.

- Dust free loading of the
- Quick lowering and lifting thanks to electric winches
- Additional safety ropes prevent the bell from falling down
- Optimum volume utilization due to distribution screw
- Thanks to electric full detector, overfilling is impossible
- Proven and reliable system over the years
