

LOADING BELLOWS

Experience from 100 years - Your specialist for conveyor technology

A large amount of dust is generated wherever various bulk materials are loaded. Our loading bellows offer not only the possibility of reliable loading, but also that of optional aspiration to reduce dust generation to a minimum.

Zuther loading bellows impress with their small installation dimensions and their large stroke of up to four meters. Whereas, when retracted, they have an installation dimension of one meter or more. Whether for loading dump trailers or tank saddles, smooth operation is guaranteed with both variants.

ZUTHER - LOADING BELLOWS

- Telescopic
- Aspiration
- Extended total length up to a maximum of six meters
- Small installation dimensions
- Low wear
- Can be used for various materials
- Optional level indication
- Electric and manual drive available
- Can be used for tankers and dump trucks
- ATEX conformity
- low dust generation
