SHIP LOADING FROM ZUTHER

Despite the high volume of transport on roads and railways, inland waterway transport remains in third place among the modes of mode of freight transport. The reason for this is not least the lower energy consumption in relation to the volume transported. ZUTHER's location is within easy reach of the Elbe-Seitenkanal. The inland ports of Wittin- gen and Uelzen are at the top of the transhipment list. The port in Uelzen was able to increase its throughput by more than a third in 2014, partly due to a si-lo expansion by ZUTHER.

- Performance 250 t/h
- electrically telescopic loading bellows with 6m stroke
- Up to 180° swiveling

PROJECT : Ship loading Rudolfs Peters Landhandel, Uelzen

Discription: Ship loading

- Performance 250 t/h
- Up to 180° swiveling

SHIP LOADING FROM ZUTHER

In order to achieve these handling rates, the appropriate loading equipment is of elementary importance. There are virtually no limits to the quantities that can be handled. Our ship loading facilities prove themselves every day under the most difficult operating conditions.

Therefore, talk to us and together we will develop a concept especially for your requirements.
